COURSE 65316A

Administering a SQL Database (2025)

The Modernization of 55316A

Executive Summary

The 65316A five-day instructor-led course provides the essential training required to administer and maintain modern SQL Server and Azure SQL environments. Designed for organizations requiring high-availability and rock-solid security.

Certified Quality Standards

Full compliance with industry auditing requirements for SQL Server 2025. High-quality instructional design that guarantees educational ROI and consistent student outcomes.

Familiar Logical Flow

Instructors will find the layout intuitive as it preserves the proven logical flow of the legacy 55316A courseware, minimizing preparation time and ensuring training continuity.

Instructor-Led Facilitation

Expert instructors act as high-level facilitators, ensuring students bridge the gap between technical theory and business application through guided exploration.

Modernized Security Focus

Includes the latest 2025 protocols for Microsoft Entra ID integration and granular server-level permissions for zero-trust environments and robust access control.

Course Highlights

Duration: 5 Days

Level: Intermediate

Labs: SQL Server 2025

Delivery: ILT / Bootcamp

Assessment

Skills verified via multiple-choice testing before and after class to ensure knowledge retention.
